

14 REFERENCE TABLES

14.0 REFERENCE TABLES

TMS 7 provides various Reference Tables which contain definitions to many of the codes that will be found when working with Security Cooperation Training Programs. These codes will appear within the TMS 7 program, on the STL, in the MASL etc. If you see a code in which you do not know its meaning, look up the definition in its Reference Table.

14.1 Update Reference Tables

Hint: To ensure you have the most current collection of Reference Tables and code definitions make sure the Reference File is updated regularly in TMS. See the section “Getting Your Data – Reference File Download” of this User Guide for instructions on downloading and importing a current Reference File. The Reference File that is downloaded from the SAN contains all the Reference Tables used in TMS 7.

14.2 Accessing Reference Tables

The following illustrates how to access the Reference Tables and code definitions in TMS 7.

- ▶ From the TMS Main Menu:
 - Click the “Reference Tables” dropdown box.
 - Locate the table containing the code you want to lookup.
 - Select the table
