

APPENDIX C

Software Site License

Note: This document is to be used as authority for the presence and use of the Training Management System (TMS) software by all offices involved in the management of Security Assistance programs.

1. The following pertains to the use of the **Training Management System (TMS)**. This software is an application of *Microsoft Access* and was developed entirely in house by DISAM. Thus it was funded by Foreign Military Sales (FMS) administrative funds, and is wholly and completely owned by the DoD. The TMS software is authorized for use by all Security Assistance offices, worldwide, as well as CONUS installations. TMS is a MS Access *run time* program and does not require the installation and use of *Microsoft Access*. SAN system administrators **are** authorized to copy the TMS installation disks and further distribute the installation software to authorized users. A modified version of the software in which the Invitational Travel Order (ITO) function has been removed, identified as **TMS Foreign User Version**, can be issued to and used by foreign national personnel in countries who are authorized Security Assistance recipients.

2. Authority for the preceding is contained in DoD 5105.38-M, the *Security Assistance Management Manual*, Section 1504.
